

Close Down Procedure for Gas Storage Water Heaters

1. Turn the gas control knob clockwise so that the “★” position (pilot) is facing the front of the gas control. You will feel it click into place. This setting will leave the pilot flame alight however the main burner will not be able to light.
2. Then, continue turning the gas control knob clockwise so that the “●” (off) position is facing the front of the gas control. You will feel it click into place. This setting shuts the gas control down completely.
