

# Heat Pump Installation

## Where can I install a Heat Pump?

While heat pumps work best in warmer climates, they will continue to work in cooler areas. This map shows the cooler areas of Australia shaded in grey. In these cooler areas, consumers may experience longer hot water heat-up times in winter. Because the efficiency benefits of heat pumps in these conditions are reduced, installation of heat pumps in these areas is not recommended. For more detailed information for your location, please refer to the postcode listing below.

## Installation Guidelines (Postcode Range)

The table below gives reference to post code locations where it is recommend to install the heat pump range. Rinnai only guarantee the hot water delivery performance of our heat pump models in these areas. Installation outside of these areas could result in periods of reduced hot water delivery and is not covered under warranty.

Recommended Installation Areas By Postcode				
800-2327	2425-2574	3292	5237-5240	5303
2331	2578	3305	5242	5304
2334	2648	3380	5243	5308
2335	2672-2675	3400	5245	5310-5340
2356	2717	3402	5246	5342-5346
2361	2737-2757	3488-3490	5253	5353-5357
2371	2759-2774	3494-3512	5254	5374
2372	2821-2825	3580	5256-5261	5400
2386-2388	2828	3891	5264-5266	5421
2397-2402	2829	3892	5275	5433
2405-2421	2831-2840	4000-5223	5276	5453-5491
2423	2873-2899	5232	5278-5291	5495-6799
